

# **Big Data, Science and Cow Improvement: The Power of Information!**

**Brian Van Doormaal, Canadian Dairy Network (CDN)  
Building a Sustainable Dairy Industry, DFC Symposium  
November 7-8, 2017, Ottawa**

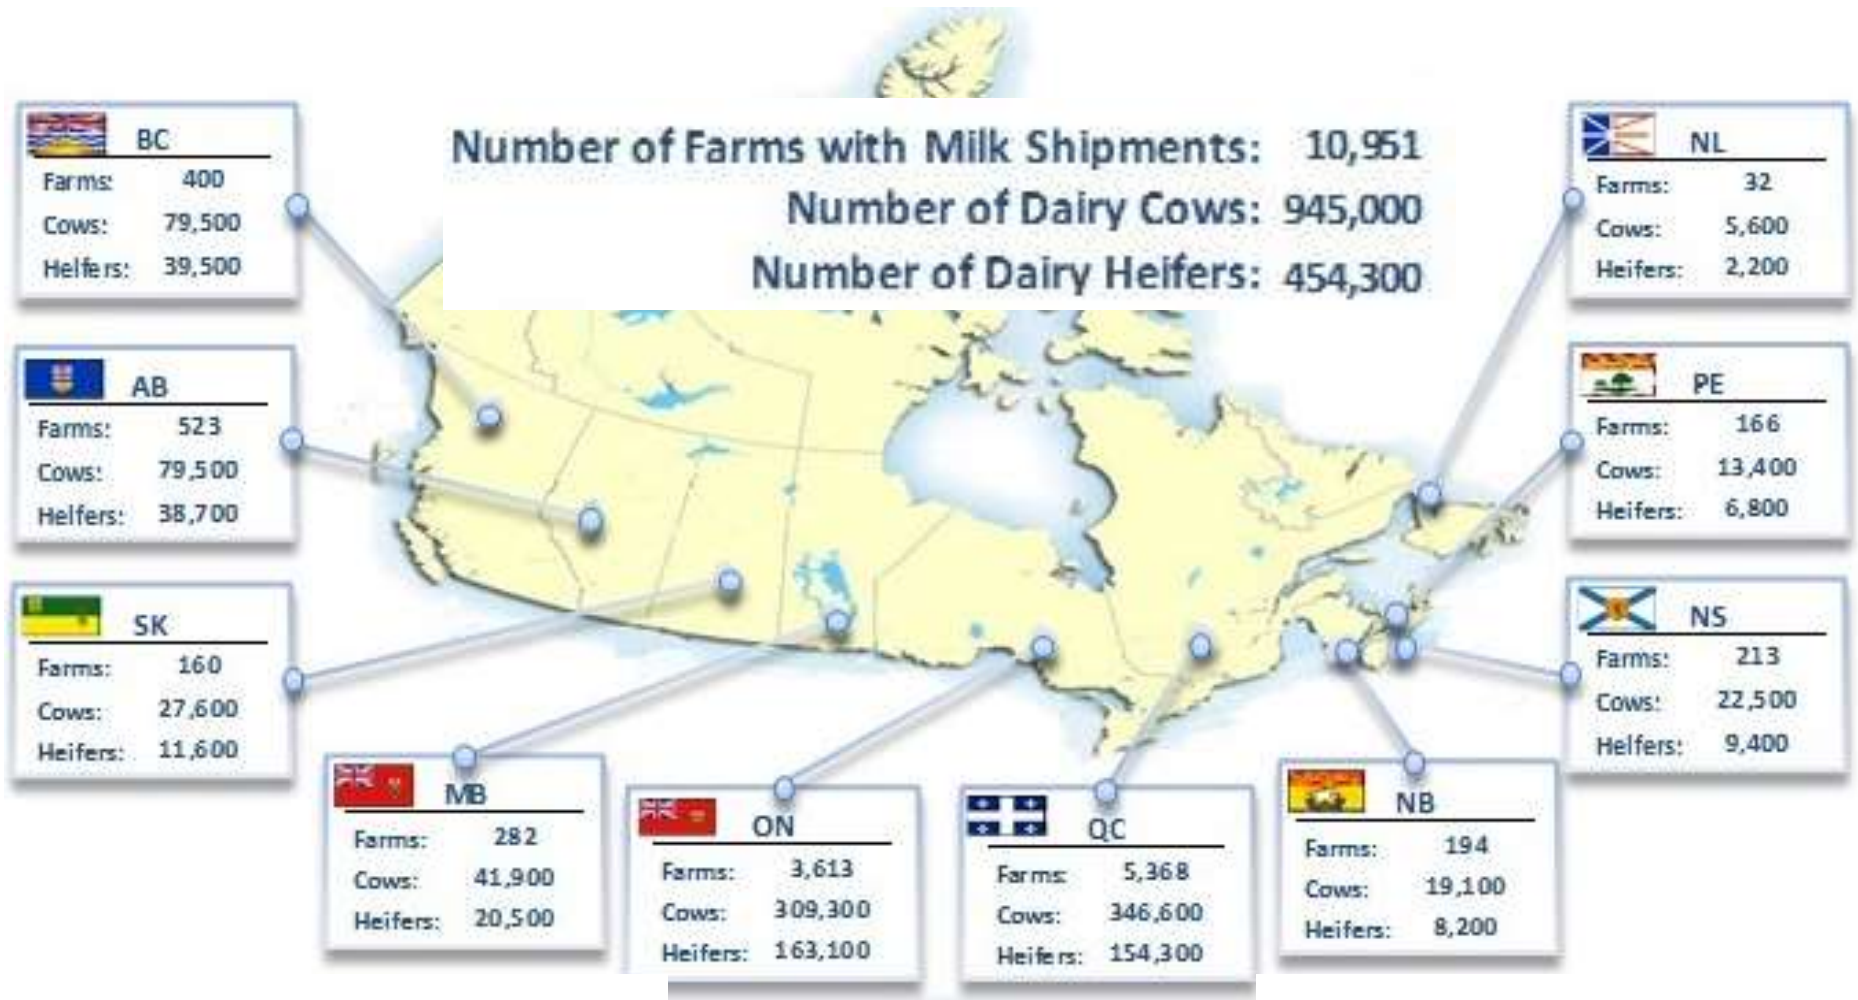

# Our Product

World population expected to approach 10 billion by 2050

# Canadian Dairy Population

Source: Canadian Dairy Information Centre, Government of Canada

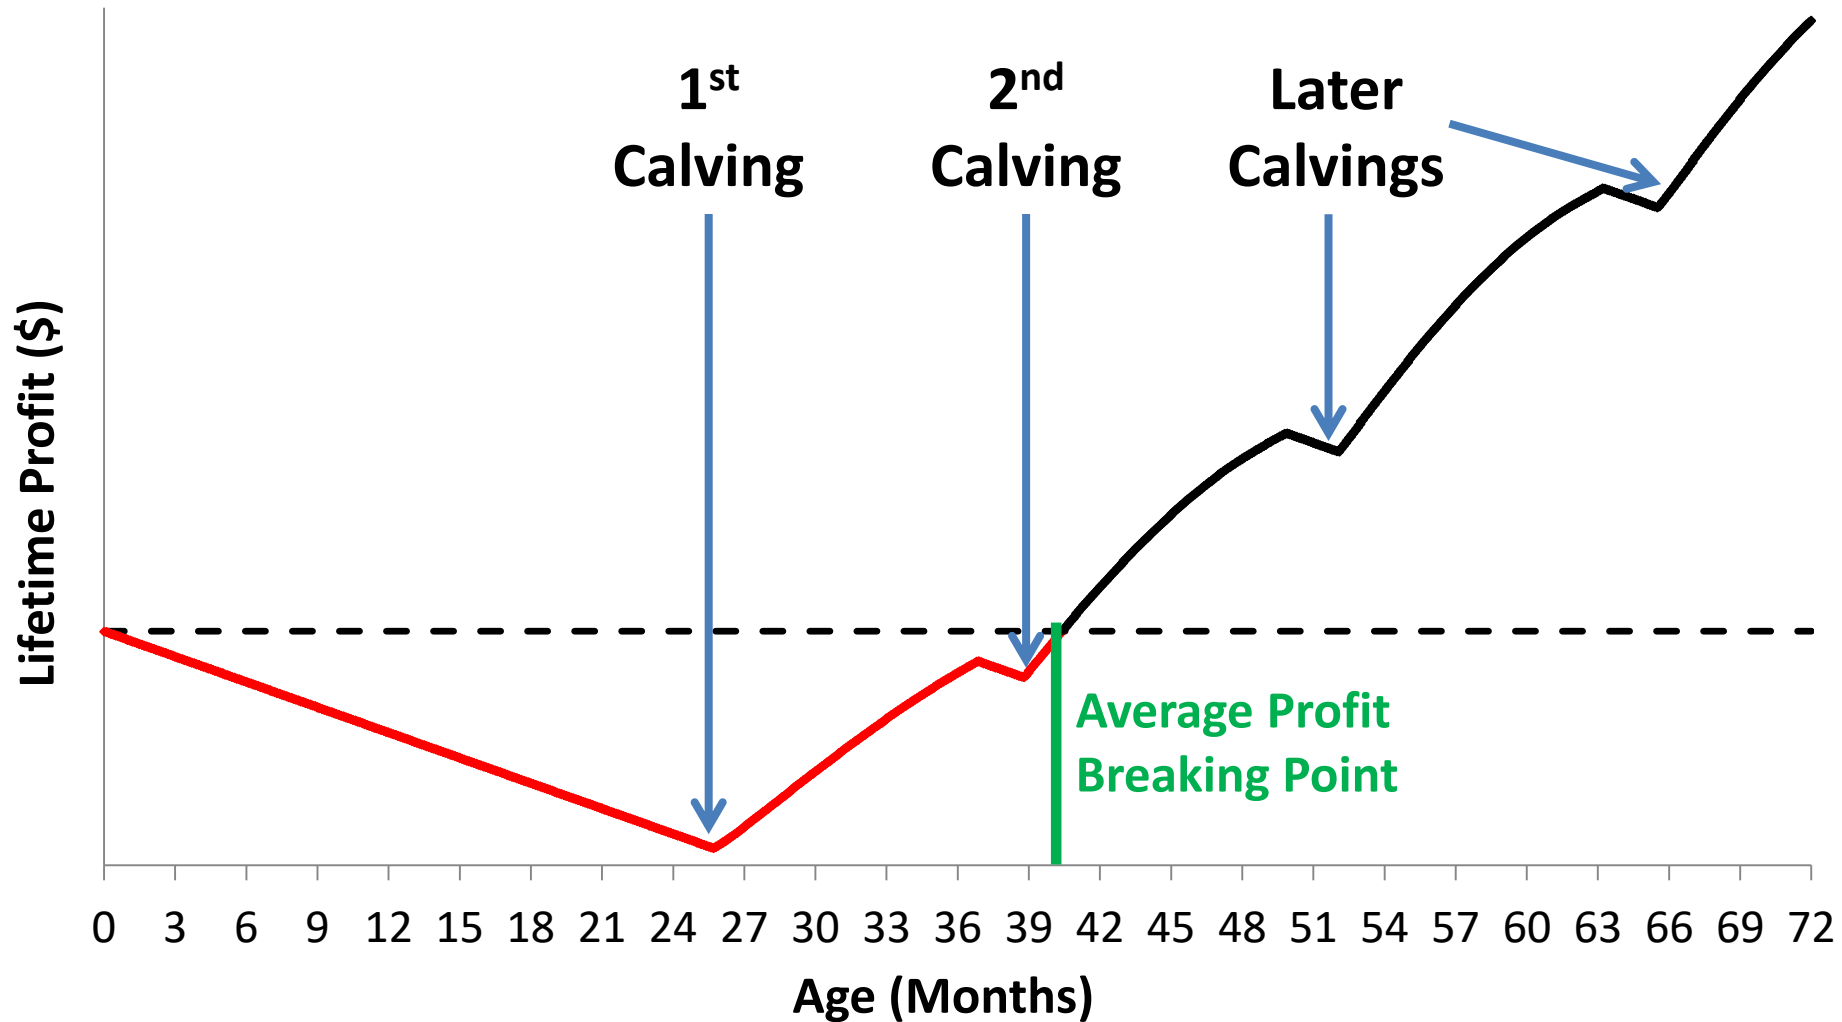

# The Life of a Dairy Farmer

- Dairy farmers **MUST** milk their herd of cows at least twice every day
- They feed all animals several times daily, provide a sanitary living space and nurture all calves
- They record various events on each animal as they occur daily:
  - Heat detection, breeding, calving, production, etc...
  - Prevention, occurrence and treatment of health events
  - Behavioural characteristics

Dairy Farmers  
**LOVE**  
their animals  
and most  
know them  
individually

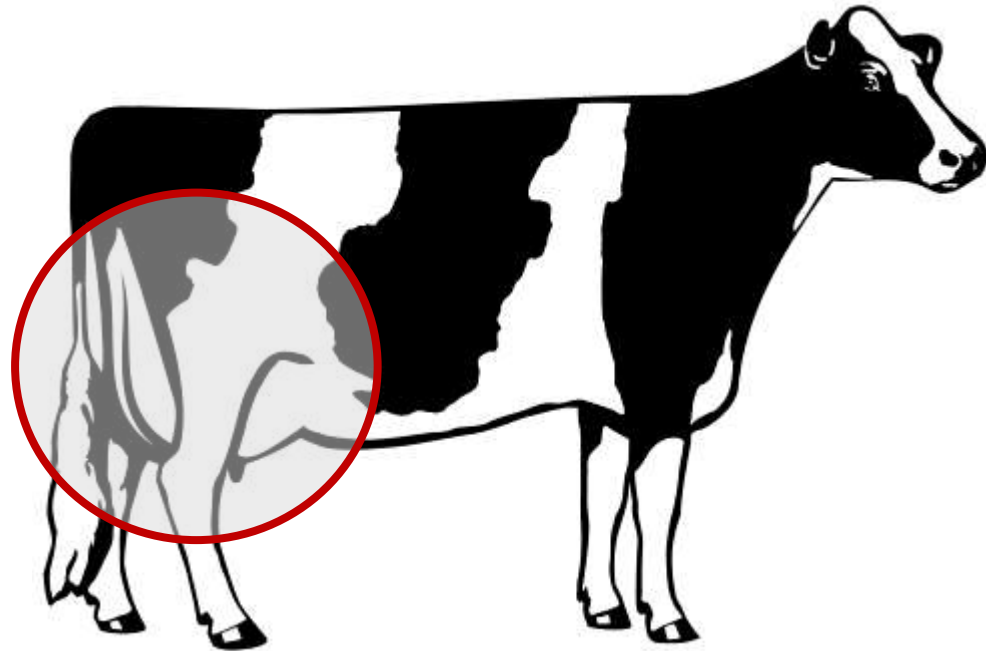

# Typical Lifetime Profit Curve

# Industry Data Collection

- **Production**

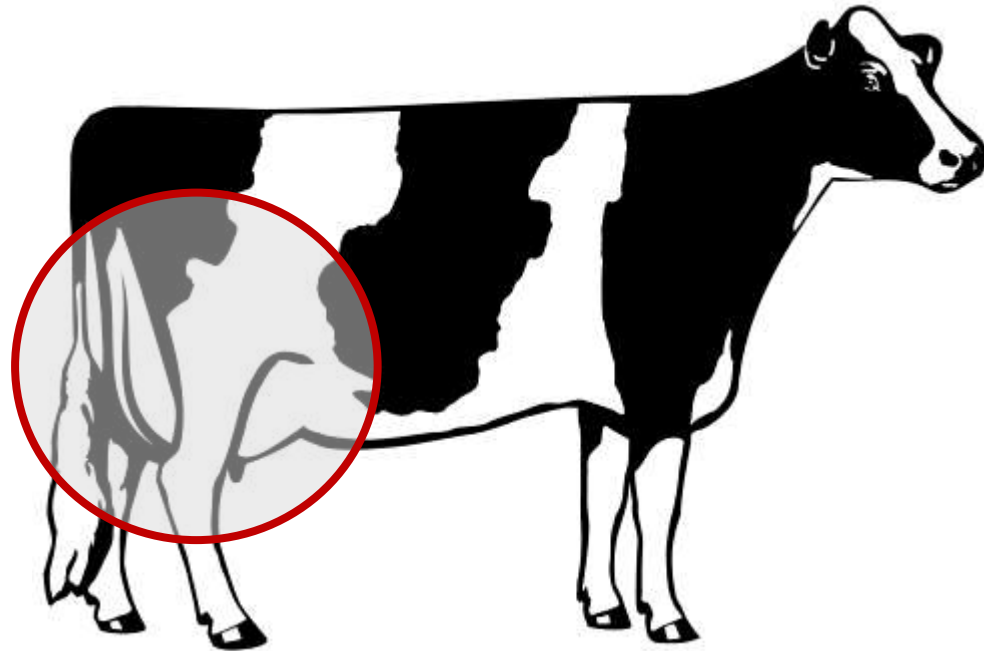

- Routine farm visits 10-12 times per year to measure milk weight on each cow
- Also a milk sample for analysis of fat and protein percentages
- Provides complete lactation records for official publication

# Industry Data Collection

- **Milk Sample Analysis**

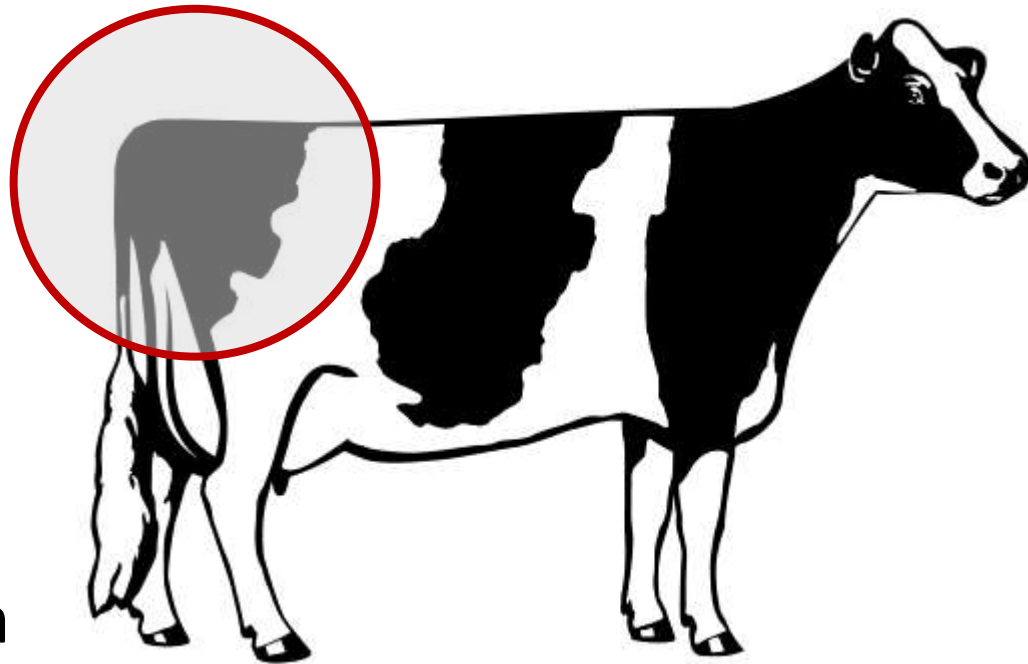

- Milk composition
  - ❑ Fat, protein, lactose, fatty acids, etc...
- Somatic cell count to manage mastitis
- MUN (indicator of proper energy balance)
- BHB (indicator for management of ketosis disease)
- Other tests for herd management

# Industry Data Collection

- **Reproduction:**

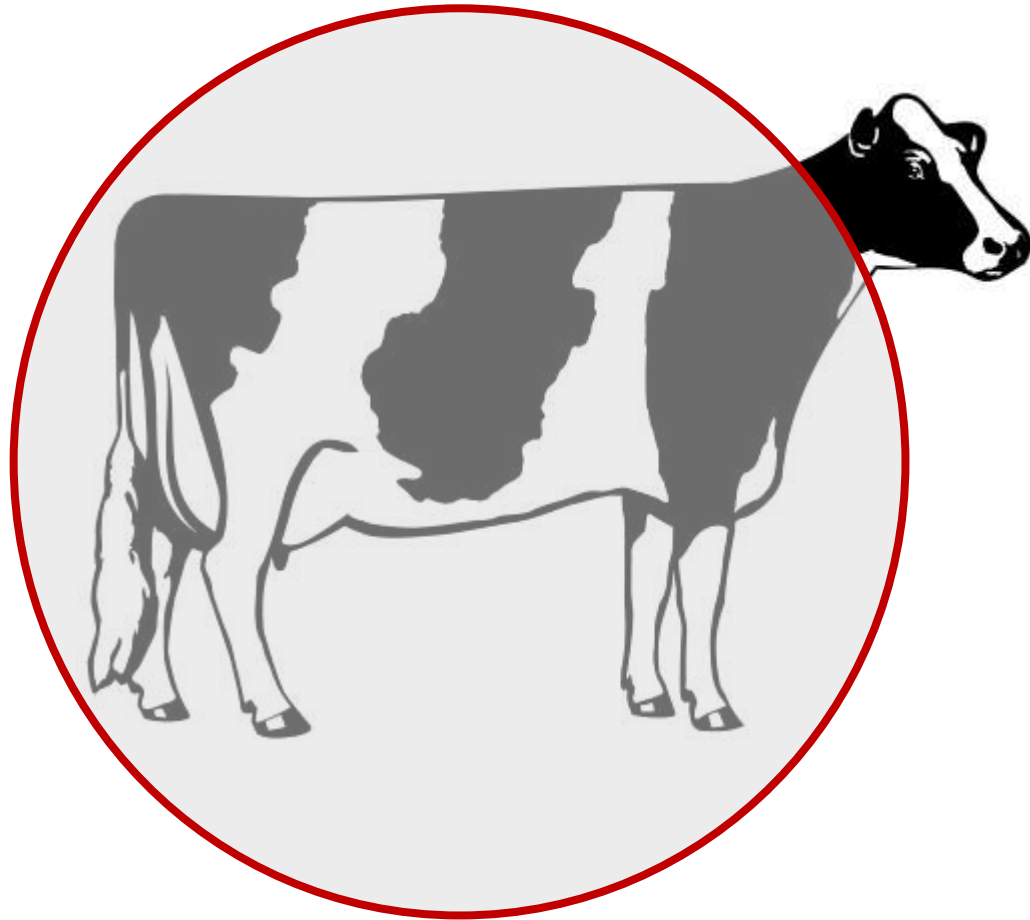

- Every breeding
- Every calving:
  - ☐ Calf identification and birth date
  - ☐ Calf sex & size
  - ☐ Ease of birth
  - ☐ Calf survival
- Identifies sire and dam of calf for pedigree recording

# Industry Data Collection

- **Animal Health**

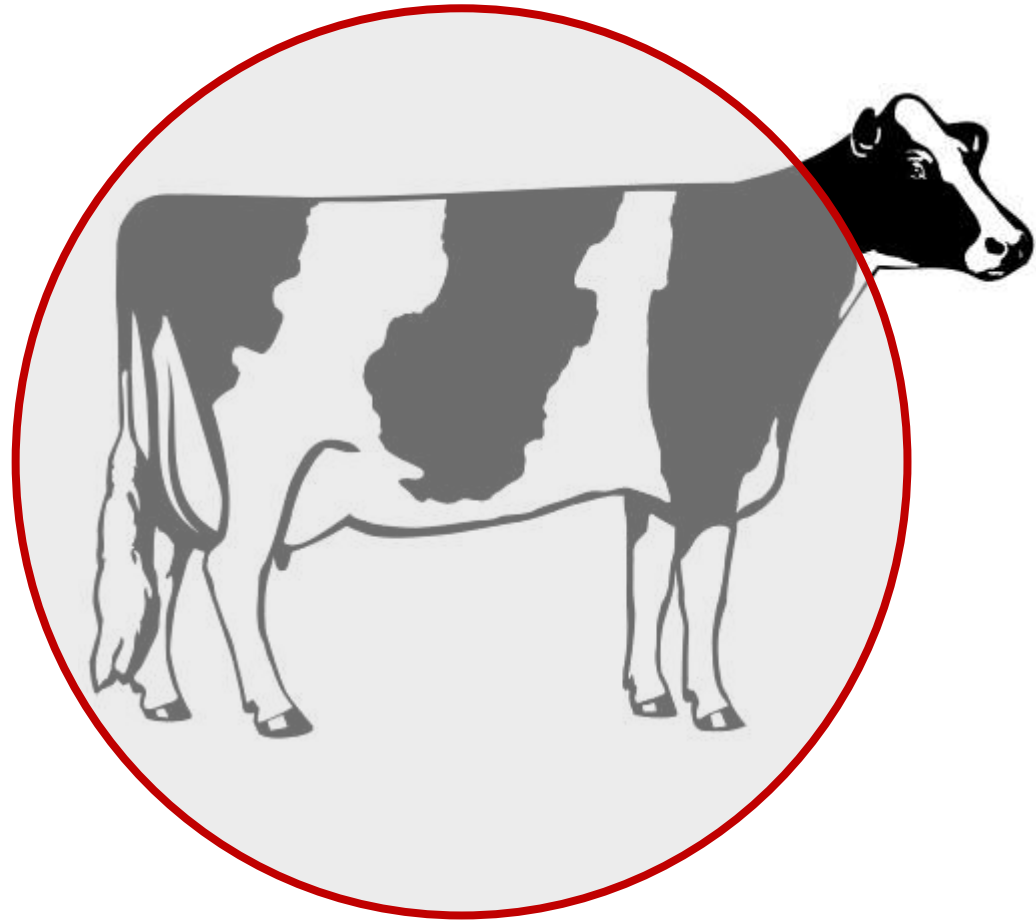

- Occurrence of 8 most costly diseases in milking dairy cows
- Hoof health lesions that are related to lameness
  - ❑ Genetic evaluations starting December to reduce incidence of Digital Dermatitis

# Industry Data Collection

- **Body Characteristics**

- Overall Conformation
- Mammary System
- Feet & Legs
- Dairy Strength
- Rump

# Body Conformation Assessment

## MAMMARY SYSTEM (42%)

UDDER FLOOR  
(Tilt of udder floor)

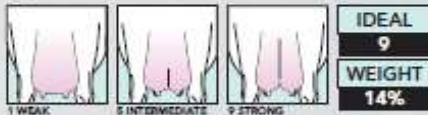

UDDER DEPTH  
(From hock to floor of udder)

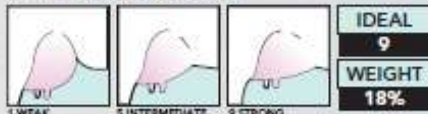

UDDER TEXTURE  
(Softness and expandability)

MEDIAN SUSPENSORY  
(Depth of cleft (fore/rear))

FORE ATTACHMENT  
(Attachment to abdominal wall)

FRONT TEAT PLACEMENT  
(Teat placement from centre of quarter)

## FEET & LEGS (28%)

FOOT ANGLE  
(Angle of hairline)

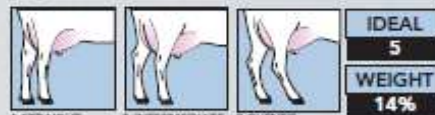

HEEL DEPTH  
(Depth of heel on outside claw)

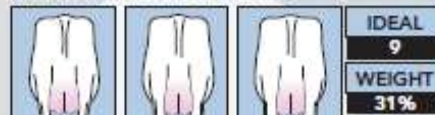

BONE QUALITY  
(Flatness of bone)

REAR LEGS-SIDE VIEW  
(Degree of curvature)

REAR LEGS-REAR VIEW  
(Turn of hock when viewed from the rear)

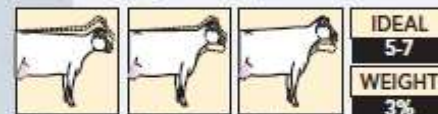

## DAIRY STRENGTH (20%)

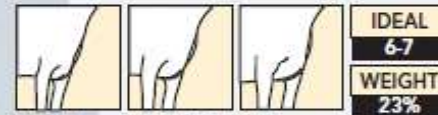

STATURE  
(Height at rump)

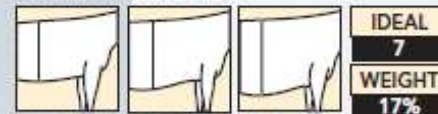

HEIGHT AT FRONT END  
(Corresponding height at front end)

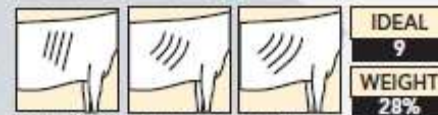

CHEST WIDTH  
(Width of chest floor)

BODY DEPTH  
(Depth of body at the rear rib)

ANGULARITY  
(Angle, openness and spring of ribs)

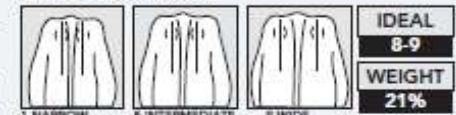

## RUMP (10%)

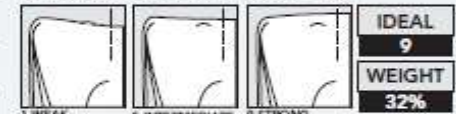

RUMP ANGLE  
(Height of pin bones relative to height of hip bones)

PIN WIDTH  
(Point of pin to point of pin)

LOIN STRENGTH  
(Strength of vertebrae between back and rump)

THURL PLACEMENT  
(Horizontal position of thurl between the hook and pin bones)

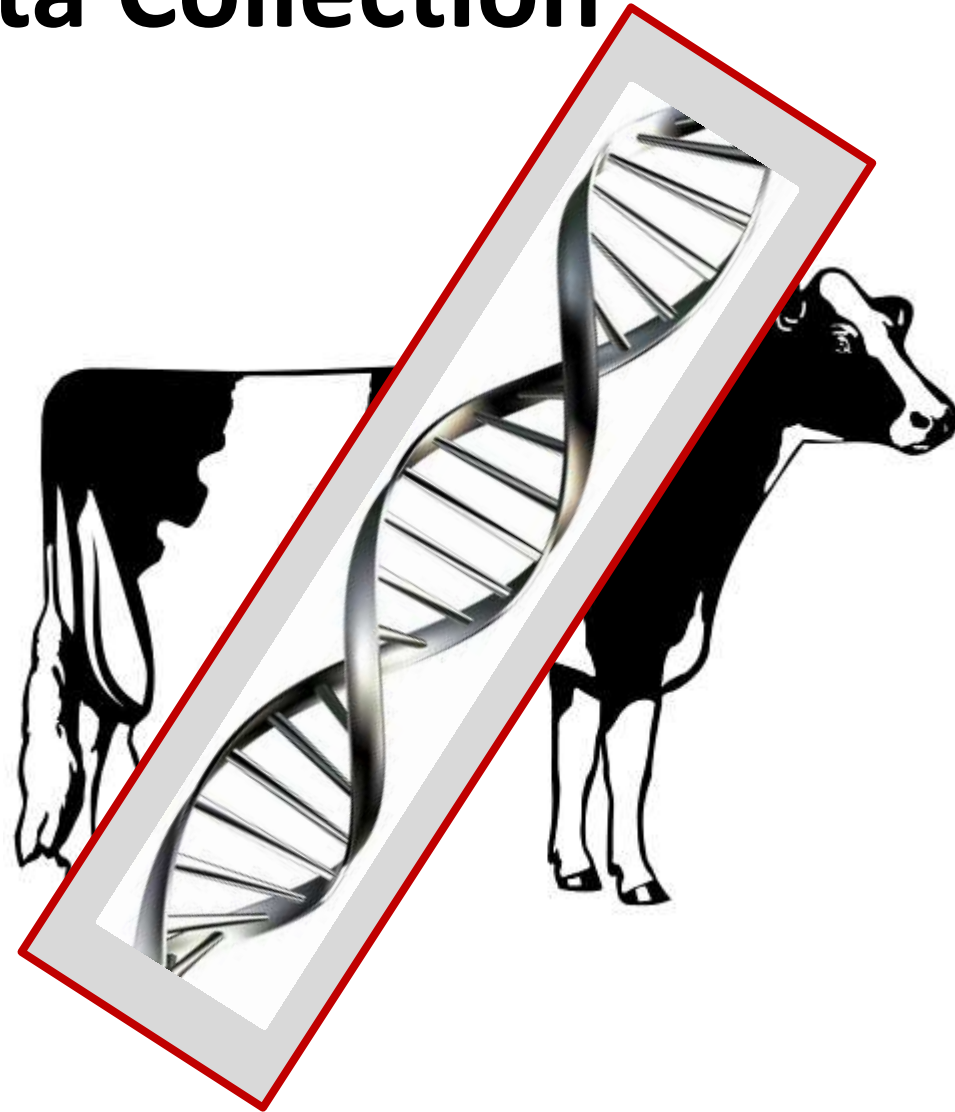

DEFECTIVE CHARACTERISTICS (DEDUCTION)  
Advanced Anus (2.5) Recessed Tailhead (1.0)  
Advanced Tailhead (1.5) High Tailhead (0.5)

# Industry Data Collection

- **Animal's DNA**

- Started in 2009 and interest is growing
- Primary purpose is more accurate genetic evaluations
- Result has been a significant increase in the rate of genetic progress

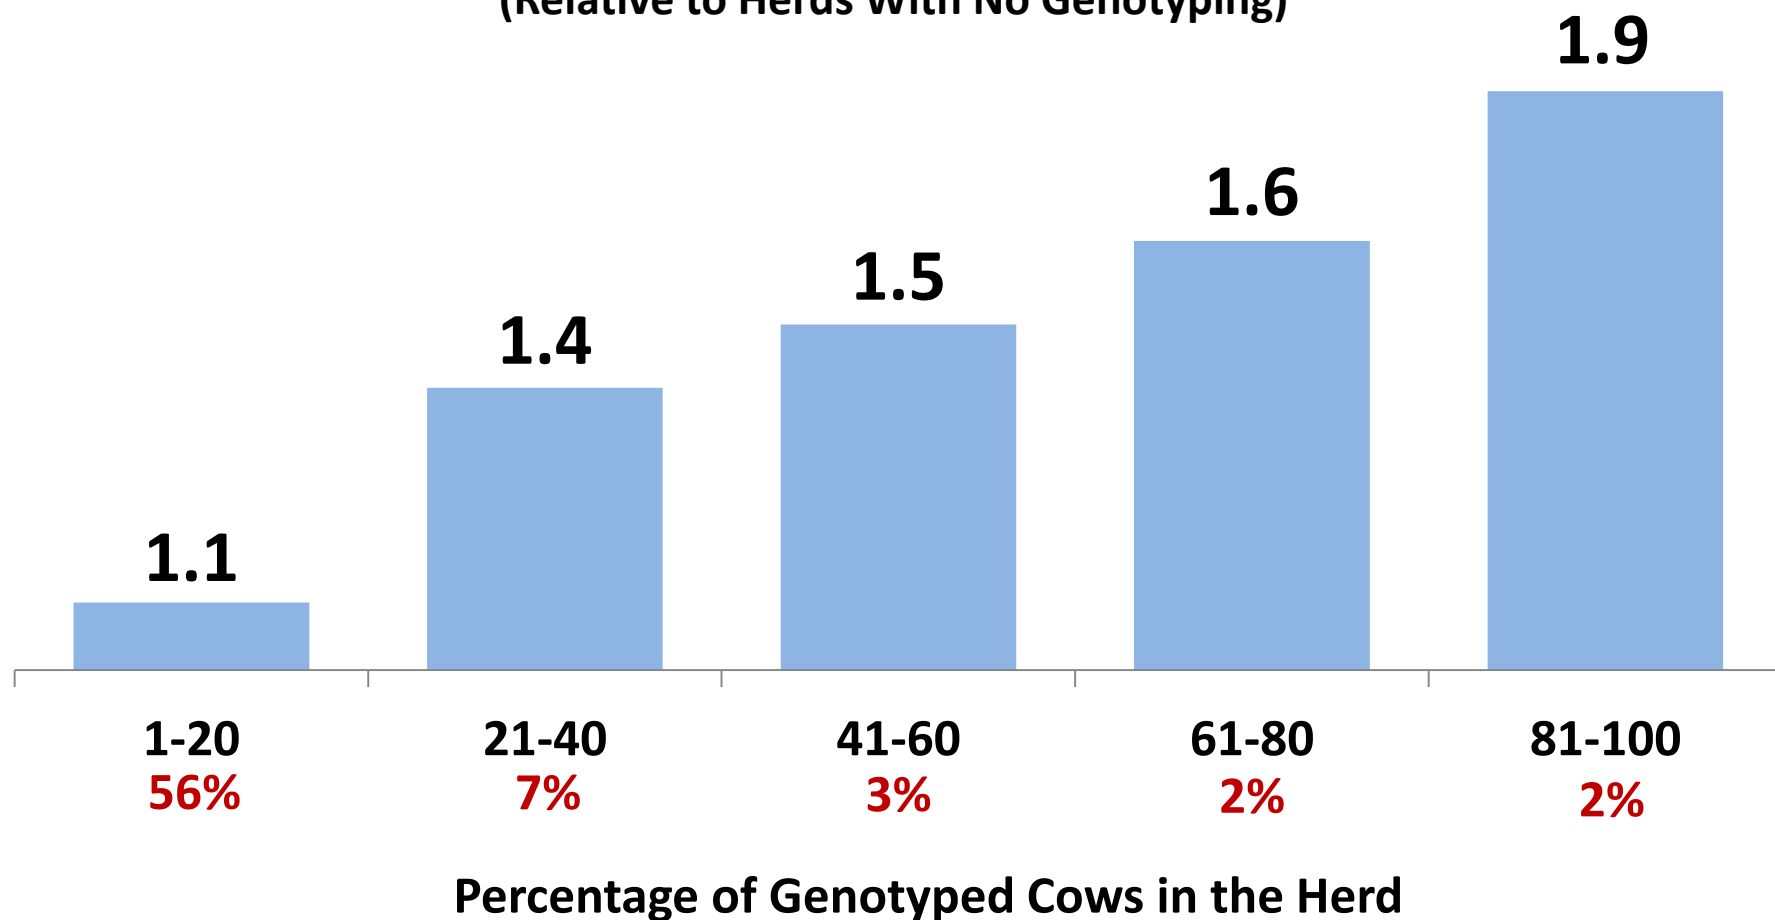

# Dairy Cattle Genotypes at CDN

Breed	Genotypes	Percentage
Ayrshire	8,200	0.4%
Brown Swiss	35,600	1.8%
Guernsey	3,700	0.2%
Holstein	1,738,300	86.5%
Jersey	223,200	11.1%
<b>Total</b>	<b>2,009,000</b>	<b>100%</b>

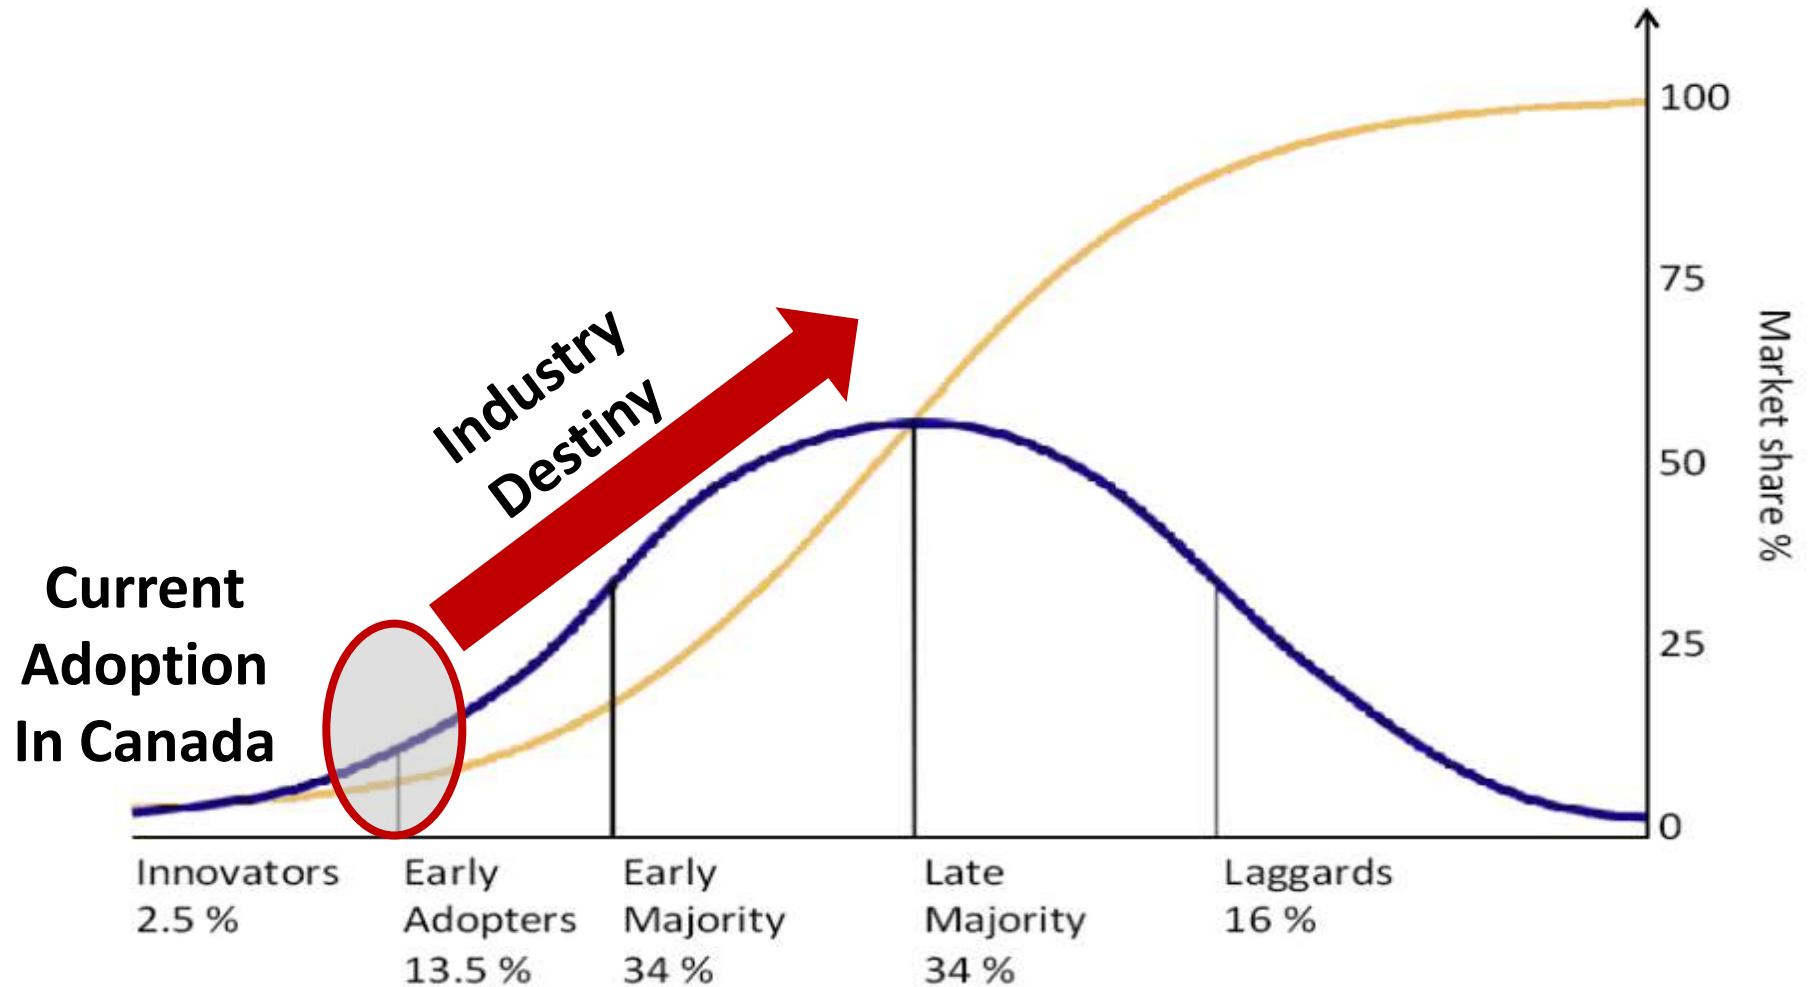

**Over Two Million Total Genotypes!**

# Herd Genetic Level and Genomics Adoption

Increase in Average Pro\$ Value of Cows by Genotyping Adoption Rate  
(Relative to Herds With No Genotyping)

# Technology Adoption Curve

# CDN = The Power of Information

- I've proven my point...
- Dairy farmers (and industry organizations) collect **A LOT** of data pertaining to their animals
- CDN's database is the central data repository for all such data relevant to breed improvement

**CDN database currently includes over 1.4 BILLION data records**

# Data Collection Into **Information**

- CDN receives data collected by industry partners
- Web site ([www.cdn.ca](http://www.cdn.ca)) is a highly used tool for searching information about dairy animals in Canada
  - Over 30,000 unique users each month
- Producers can search animals in their herd or any other animal

# CDN Web Site is Global!

# Genetic Progress with Genomics

# Genomics Impact on Genetic Progress

# Annual Net Benefit from Genomics

Period	Average Rate of Progress per Year (Pro \$)	Net Annual Economic Value to the Industry <sup>1</sup>
Before genomics (before 2009)	\$79	\$249 Million/year
With genomics (2009-2014)	\$176	\$556 Million/year
Expected in 2015-2019	\$237	\$748 Million/year

<sup>1</sup> Based on 0.9M milking cows; net returns per cow using 2014 Valacta figures for milk income, feed costs, heifer rearing costs and cow survival to 6 years of age; benefits account for the cumulative nature of genetic change and are discounted at 5% per year.

# On the Horizon...

- Canadian dairy industry is positioned for three **MAJOR** opportunities within the next few years:
  1. Genetic improvement for additional traits associated with animal health and welfare
  2. Genetic selection for feed efficiency and reduced methane emissions
  3. Collection of DNA in association with national traceability for animal and product traceback

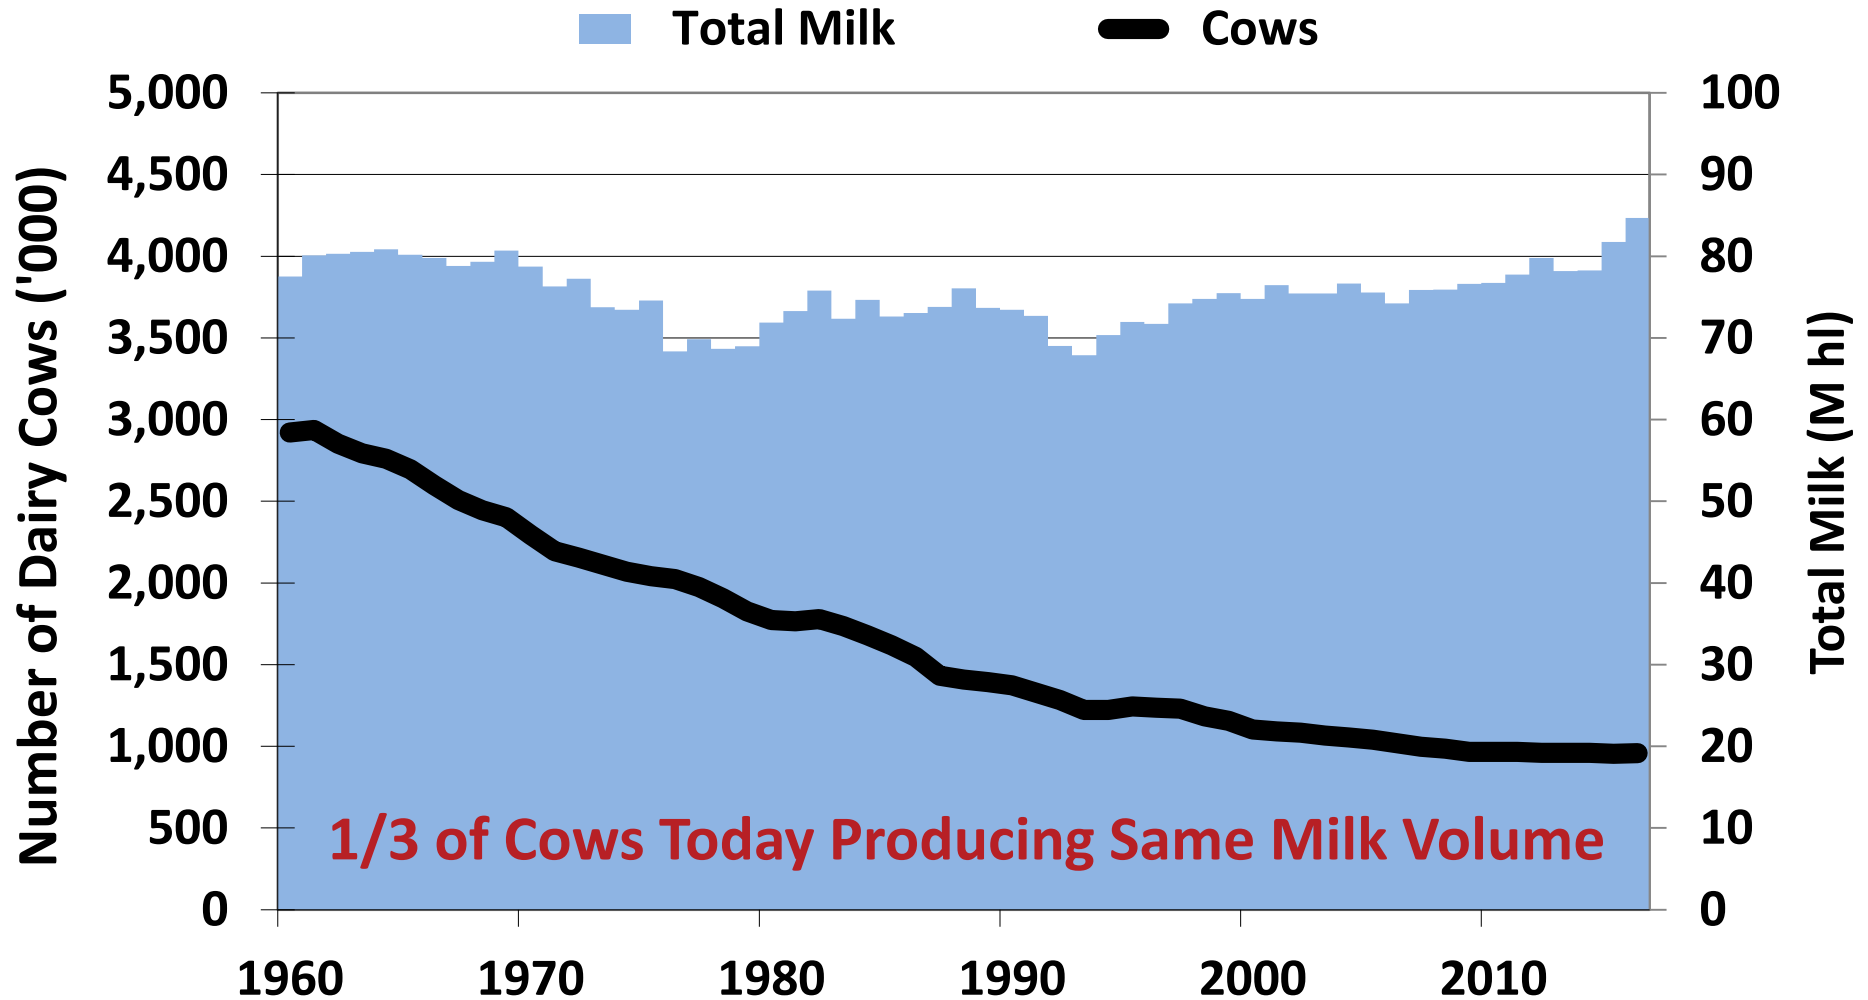

# Animal Health & Welfare Traits

- Producers can currently select for some traits:
  - Resistance to mastitis and metabolic diseases
  - Digital dermatitis (Strawberry foot disease)
- With genomics, CDN will add more traits in coming years:
  - More animal health, disease and welfare traits
  - More traits related to lameness and hoof health

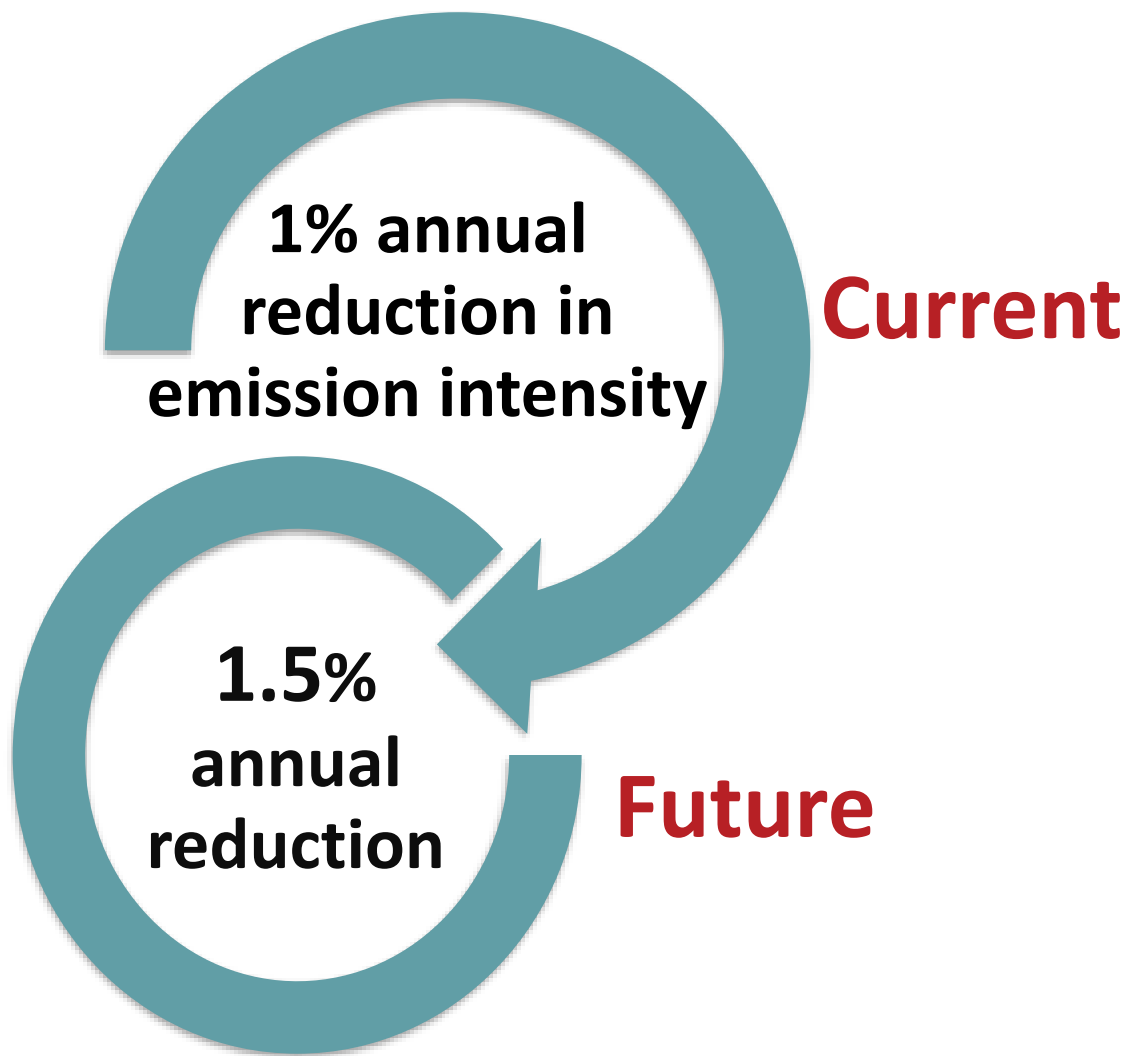

# Feed Efficiency & Methane Emissions

- CDN is the industry organization leading a major research project funded by Genome Canada
  - 4-year budget is \$10.3M, with \$860,000 from CDN and \$3.8M from Genome Canada
  - Research leadership from both University of Guelph and University of Alberta (national scope)
  - Involves several other partners, both nationally and internationally, for the collection of daily feed intake and methane emission data as well as DNA for thousands of individual cows
  - Key deliverable is genomic evaluations in near future

# Dairy Industry Sustainability

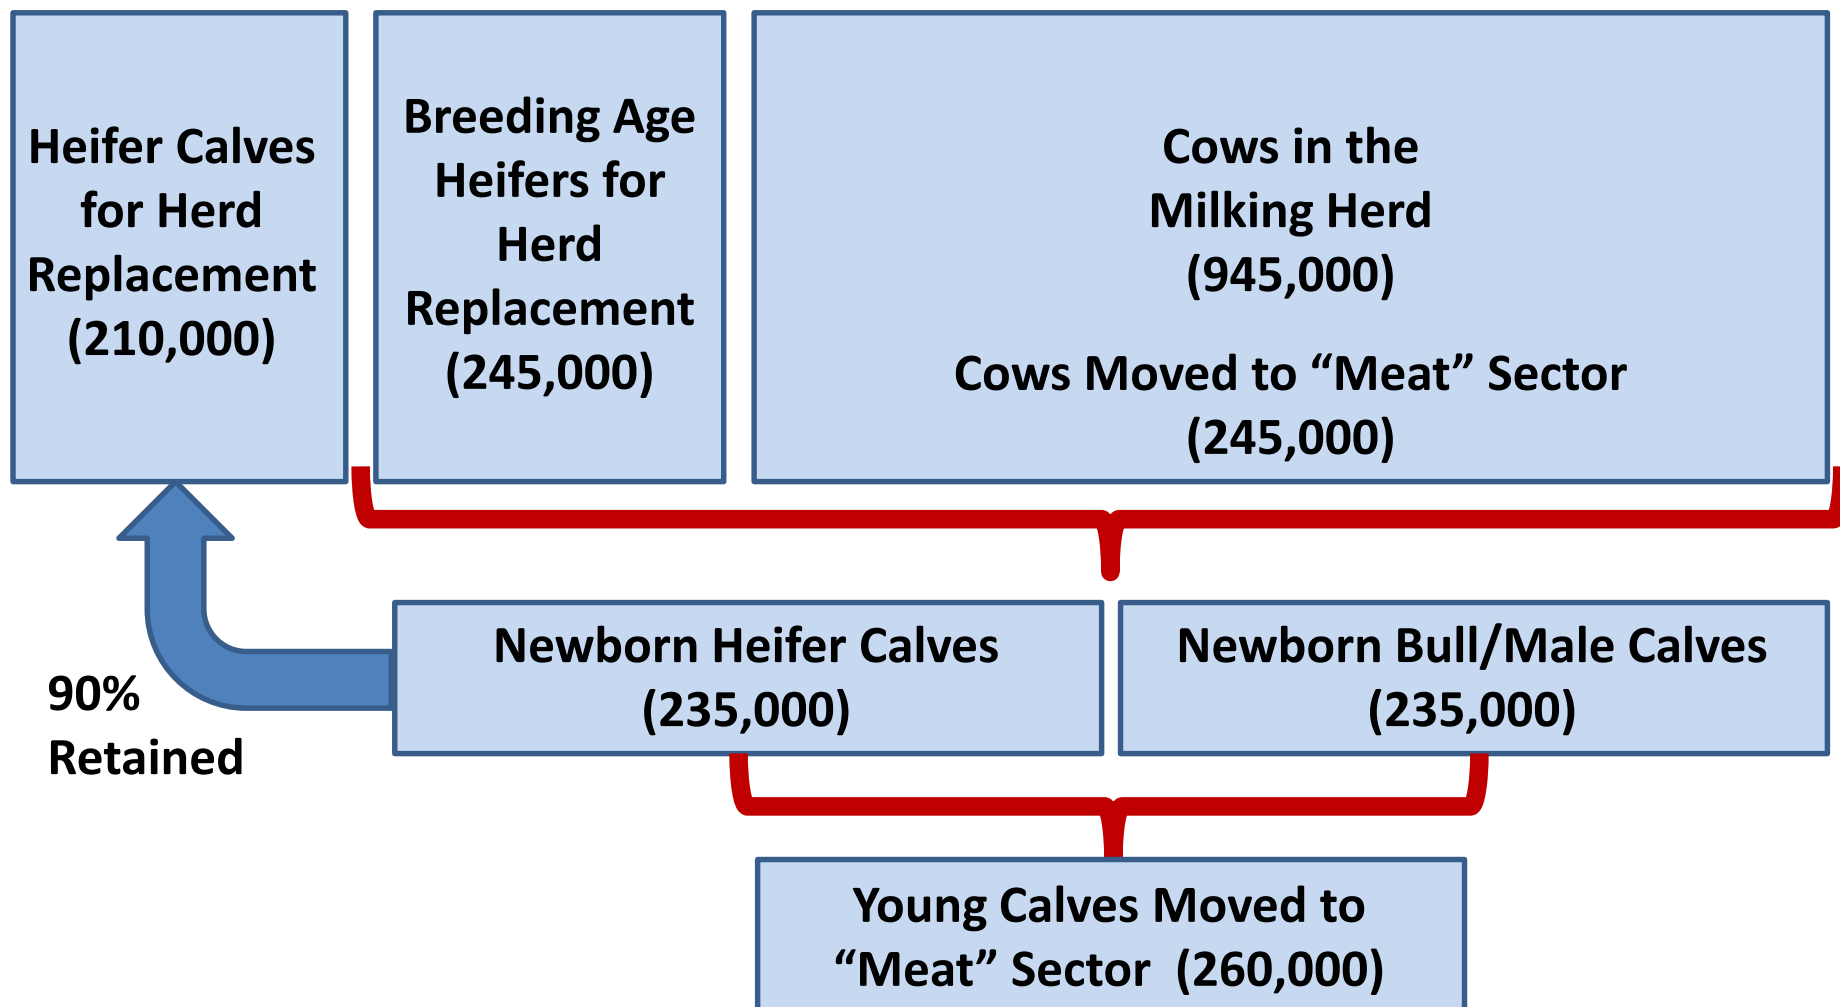

# Effect of Selection on “Efficiency”

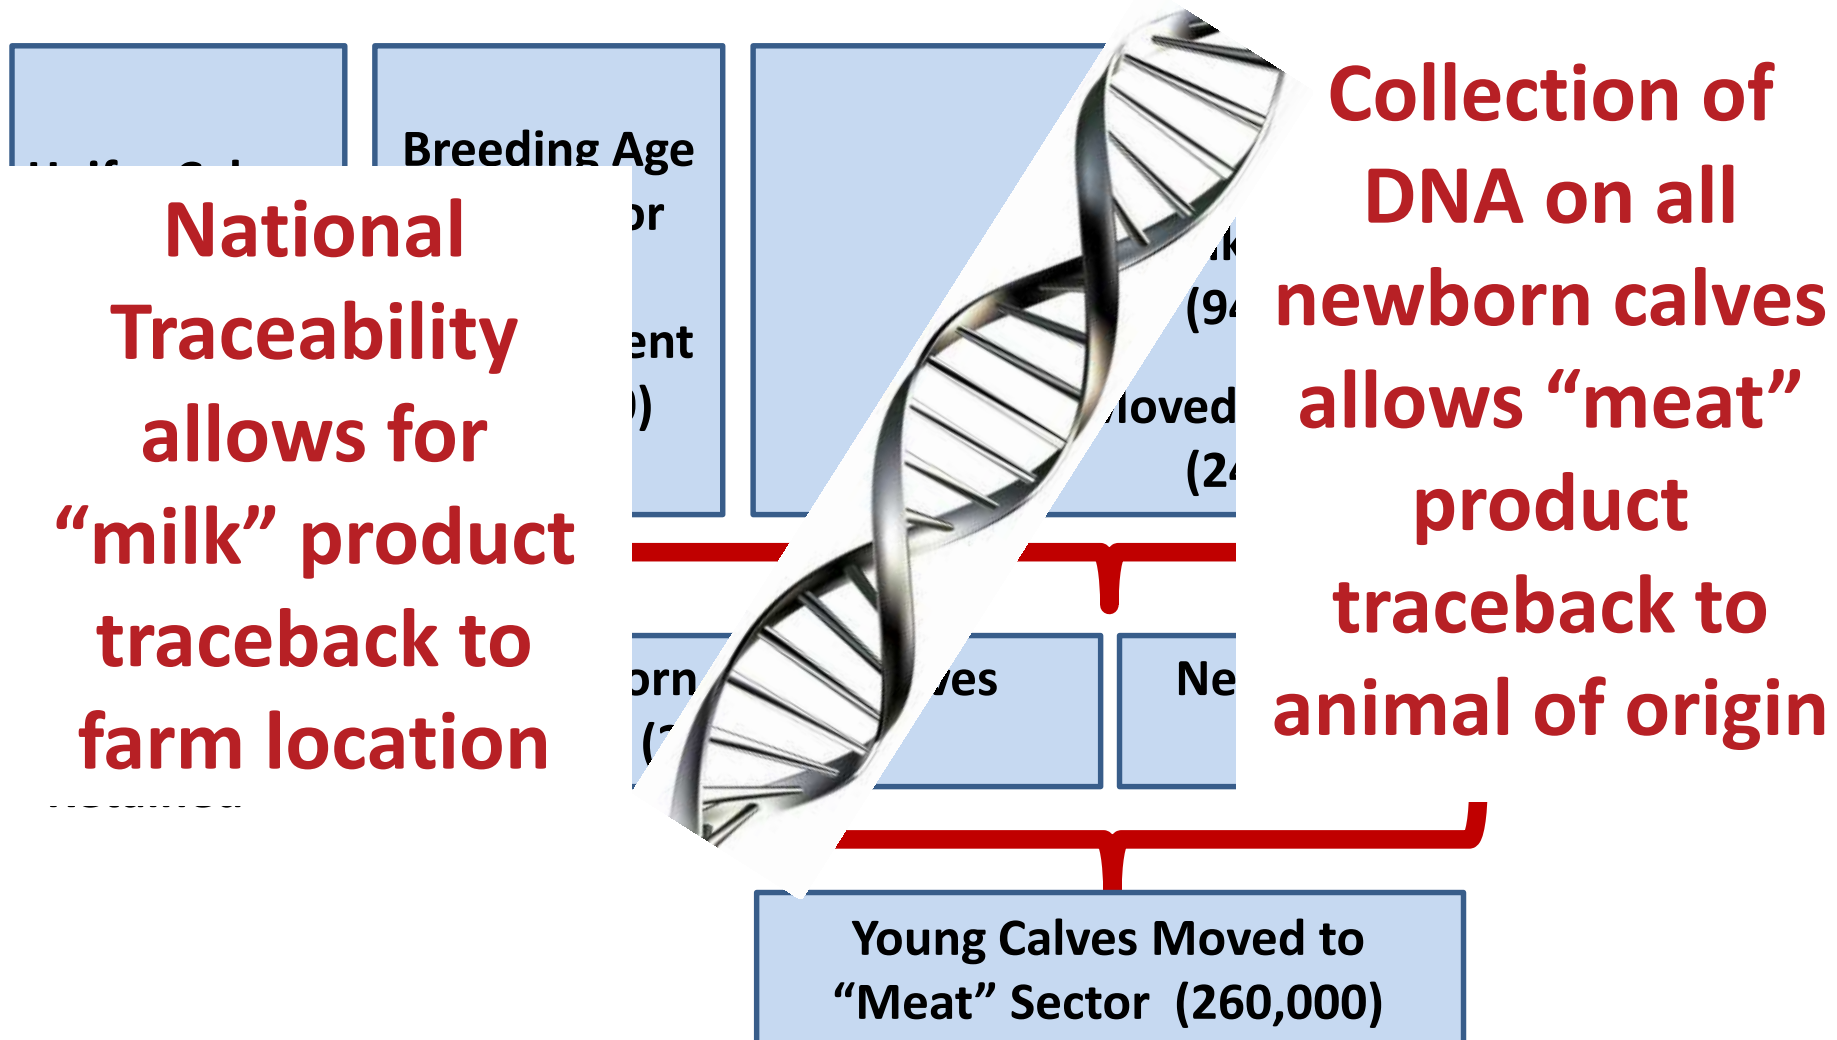

# National Traceability and Traceback

- Dairy industry is very close to having a complete national traceability system via proAction initiative of Dairy Farmers of Canada
  - All animals uniquely identified at birth
  - All locations where animals may reside have a unique premises identification
  - Producers, transporters and other premise locations mandated to report all animal movements
  - Soon to build national traceability database
- Collection of DNA for newborn calves provides a huge new opportunity and industry benefit

# National Dairy Herd Life Cycle

# Future Product Traceback

# Summary

- Dairy cattle industry is a major contributor to Canada's economy and growth
- Known as the leading livestock sector for data collection and technology adoption
- Genomics applied for past 8 years has proven its significant value and economic benefits
- Dairy sector is very well positioned for taking advantage of huge opportunities on the horizon
